```
{
  "success": true,
  "message": "Trips fetched successfully",
  "data": [
    {
      "_id": "string",
      "busId": {
        "_id": "string",
        "operatorId": "string",
        "name": "string",
        "registrationNumber": "string",
        "type": "string",
        "totalSeats": "number",
        "amenities": ["string"],
        "createdAt": "string",
        "updatedAt": "string"
      },
      "source": "string",
      "destination": "string",
      "departureTime": "string",
      "arrivalTime": "string",
      "price": "number",
      "availableSeats": "number",
      "createdAt": "string",
      "updatedAt": "string"
    }
  ]
}
```

1.7 POST /bookings/user

- **Description:** Creates a booking for a trip.
- **Request Body:**

```
{
  "tripId": "string",
  "seats": ["number"]
}
```

- **Response(201):**

```
{
  "success": true,
  "message": "Booking created successfully",
  "data": {
    "tripId": "string",
    "userId": "string",
    "seats": ["number"],
    "totalPrice": "number",
    "paymentStatus": "string",
    "paymentDetails": "string",
    "_id": "string",
    "createdAt": "string",
    "updatedAt": "string"
  }
}
```

1.8 GET /bookings/user

- **Description:** Retrieves all bookings for the currently logged-in user.
- **Response(200):**

```
{
  "success": true,
  "message": "Bookings retrieved successfully",
  "data": [
    {
      "_id": "string",
      "tripId": {
        "_id": "string",
        "busId": {
          "_id": "string",
          "operatorId": "string",
          "name": "string",
          "registrationNumber": "string",
          "type": "string",
          "totalSeats": "number",
          "amenities": ["string"],
          "createdAt": "string",
          "updatedAt": "string"
        },
        "source": "string",
        "destination": "string",
        "departureTime": "string",
        "arrivalTime": "string",
        "price": "number",
        "availableSeats": "number",
        "createdAt": "string",
        "updatedAt": "string"
      },
      "userId": "string",
      "seats": ["number"],
      "totalPrice": "number",
      "paymentStatus": "string",
      "paymentDetails": "string",
      "createdAt": "string",
      "updatedAt": "string"
    }
  ]
}
```

- **Description:** Deletes a booking by its ID.
- **Response(200):**

```
{
  "success": true,
  "message": "Booking deleted successfully",
  "data": null
}
```

OPERATOR ROUTES

2.1 POST /buses

- **Description:** Creates a new bus.
- **Request Body:**

```
{
  "name": "string",
  "registrationNumber": "string",
  "type": "string",
  "totalSeats": "number",
  "amenities": ["string"]
}
```

- **Response(201):**

```
{
  "success": true,
  "message": "Bus created successfully",
  "data": {
    "operatorId": "string",
    "name": "string",
    "registrationNumber": "string",
    "type": "string",
    "totalSeats": "number",
    "amenities": ["string"],
    "_id": "string",
    "createdAt": "string",
    "updatedAt": "string"
  }
}
```

2.2 GET /buses

- **Description:** Retrieves all buses for the operator.
- **Response(200):**

```
{
  "success": true,
  "message": "Buses retrieved successfully",
  "data": [
    {
      "_id": "string",
      "operatorId": "string",
      "name": "string",
      "registrationNumber": "string",
      "type": "string",
      "totalSeats": "number",
      "amenities": ["string"],
      "createdAt": "string",
      "updatedAt": "string"
    }
  ]
}
```

2.3 POST /trips

- **Description:** Creates a new trip for the bus.
- **Request Body:**

```
{
  "busId": "string",
  "source": "string",
  "destination": "string",
  "departureTime": "string",
  "arrivalTime": "string",
  "price": "number",
  "availableSeats": "number"
}
```

- **Response(201):**

```
{
  "success": true,
  "message": "Trip created successfully",
  "data": {
    "busId": "string",
    "source": "string",
    "destination": "string",
    "departureTime": "string",
    "arrivalTime": "string",
    "price": "number",
    "availableSeats": "number",
    "_id": "string",
    "createdAt": "string",
    "updatedAt": "string"
  }
}
```

- **Description:** Retrieves all trips.
- **Response(200):**

```
{
  "success": true,
  "message": "Trips fetched successfully",
  "data": [
    {
      "_id": "string",
      "busId": "string",
      "source": "string",
      "destination": "string",
      "departureTime": "string",
      "arrivalTime": "string",
      "price": "number",
      "availableSeats": "number",
      "createdAt": "string",
      "updatedAt": "string"
    }
  ]
}
```

2.5 GET /bookings/operator

- **Description:** Retrieves bookings for the operator.
- **Response(200):**

```
{
  "success": true,
  "message": "Operator bookings retrieved successfully",
  "data": [
    {
      "paymentStatus": "string",
      "paymentDetails": "string",
      "_id": "string",
      "tripId": {
        "_id": "string",
        "busId": "string",
        "source": "string",
        "destination": "string",
        "departureTime": "string",
        "arrivalTime": "string",
        "price": "number",
        "availableSeats": "number",
        "createdAt": "string",
        "updatedAt": "string"
      },
      "userId": "string",
      "seats": ["number"],
      "totalPrice": "number",
      "createdAt": "string",
      "updatedAt": "string"
    }
  ]
}
```

ADMIN ROUTES

3.1 PUT /admin/block/{userId}

- **Description:** Blocks a user by their ID.
- **Response(200):**

```
{
  "success": true,
  "message": "User blocked successfully",
  "data": {}
}
```
